## DETAILED ACTION

### *Claim Objections*

1. Claim 22 is objected to because of the following informalities: Claim 22 recites the limitation "*said* pinout arrangement of *said* second expansion card". There is insufficient antecedent basis for these limitations in the claims. Also claim 24 recites the limitation "*said passive* adaptor", while independent claim 23 recites "an adaptor". Either the term "passive" needs to be deleted from the limitation in claim 24 or that term needs to be added in the limitation in claim 23. Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 21-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Cyras et al.

With regard to claim 21, Cyras et al teaches an adaptor to read an IC card or "Smart Card" comprising: a housing that receives a Smart Card and has a pinout arrangement adapted to interface with a PCMCIA socket (fig. 3) and a circuit adapted to control selected signal lines of the pinout arrangement to permit a Smart Card controller to read and operate the Smart Card through the PCMCIA socket (fig. 1, part 18 & col. 6, lines 5-18).

With regard to claim 22, Cyras et al teaches an expansion card comprising a PCMCIA Type II/III arrangement (col. 6, lines 43-53).

With regard to claims 23, 25, and 27, Cyras et al teaches an adaptor that reads and operates Smart Cards comprising: a controller that comprises circuitry for detecting, operating, and providing communications between the smart card controller and smart card and between a smart card and a bus controller using PC card communication protocols (col. 5, lines 61+), and an adapter providing operability of smart card in a PCMCIA type II/III socket and pinout arrangement (fig. 1, part 18 & col. 6, lines 5-18).

With regard to claim 24, Cyras et al teaches the adaptor comprising a circuit and a connector, the circuit connected to the connector and operating the first expansion card and generating signals operable through the socket (col. 6, lines 5-7).

With regard to claim 26, Cyras et al teaches an expansion card type being a memory card (col. 2, lines 6-9).

### ***Response to Arguments***

4. Applicant's arguments with respect to claims 21-27 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kataoka et al and Cobb both teach a method for adapting a Smart Card through a PCMCIA interface. Harari et al teaches a removable

mother/daughter peripheral card. Okada et al and Corder both teach interfacing a peripheral device into a PCMCIA slot.
